REQUEST FOR QUALIFICATIONS

**Orange Water and Sewer Authority
Rocky Branch Interceptor Improvements
CIP Project No. 276-52
Issue Date: March 5, 2024**

Submittal Deadline: April 3, 2024, at 2PM

1. INTRODUCTION

Your firm is hereby invited to submit a written statement of qualifications to provide professional engineering services for the evaluation of the Rocky Branch Interceptor downstream of the Jones Ferry Road Water Treatment Plant (WTP). OWASA will conduct a Qualification-Based Selection process to identify the best qualified firm with which to negotiate a contract. All firms submitting qualifications must have demonstrated experience and expertise in design and construction services for sewer replacement projects.

To be considered by OWASA, responses to this RFO must be received by 2:00 p.m. Eastern Time on Wednesday, April 3, 2024. Refer to Section 5 – Submittal Requirements for details.

2. OBJECTIVES

The primary objective of the project is to:

- Allow OWASA to discharge 1000 gallon per minute (gpm) from the WTP into the Rocky Branch Interceptor without sewer capacity concerns
- Evaluate replacement or rehabilitation options for the identified sewer mains along Rocky Branch Interceptor
- Recommend design and construction plans that will achieve the needs of OWASA
- Perform construction related services to complete the recommended construction
- All other work as necessary to complete the project

3. BACKGROUND AND DESCRIPTION

The OWASA Jones Ferry Road Water Treatment Plant (WTP) has a current capacity of 20 MGD with a current daily demand around 7 to 8 MGD. The process water generated by this demand is typically recycled to the head of the plant. However, at times OWASA may need to discharge this process water to a small stream adjacent to OWASA called Rocky Branch or to the Rocky Branch Interceptor portion of the sanitary sewer system which follows along the same route as the Rocky Branch Stream. In 2011 DWQ issued a revised NPDES permit which limits our ability to discharge to the stream. As such, OWASA needs to have more discharge capacity to the sewer system. Our current sanitary sewer system capacity only allows for a discharge of around 300 gpm before causing overflows, but OWASA anticipates needing 1000 gpm capacity by 2026. In 2013 Hazen

and Sawyer (Hazen) performed a study of the Rocky Branch Sewer Interceptor and provide recommendation as to what restrictions the current sanitary system had in meeting the 1000 gpm need. As a part of that study, Hazen recommended an up-sizing of several segments along the Rocky Branch Interceptor to help meet the 1000 gpm capacity. In 2022, as part of another project, OWASA upsized an existing gravity sewer main across Jones Ferry Road with a 16-inch main as originally recommended by this study. We completed this portion of the sanitary sewer upsizing work to take advantage of lane closures already in place with another project. However, the other work originally recommended in the 2013 study has not yet been designed or implemented. This work shall aim to reuse the 2013 study to the greatest extent possible however reevaluation of the past recommendations may be warranted.

4. SCOPE OF SERVICES

The engineering services required for this project are expected to be completed to meet the objective outlined above and in general accordance with a scope of services as needed to accomplish the tasks listed below. **However, the final scope of services will be negotiated with the selected engineering firm and may include modified and/or additional tasks.**
