### **2. OBJECTIVES**

The primary objective of the project is to assist and provide guidance to OWASA for assessment, procurement, and implementation of a new CMMS system that suits the needs of the organization for operations and maintenance tasks, asset management tasks, and reporting tasks at the Jones Ferry Road Water Treatment Plant (WTP), the Mason Farm Wastewater Treatment Plant (WWTP), Collection and Distribution System, and the applicable remote sites for both the WTP and the WWTP including:

### **3. BACKGROUND AND DESCRIPTION**

OWASA owns and maintains 3 raw water reservoirs, over 14 miles of raw water lines, the Jones Ferry Road Water Treatment Plant (WTP), 383 miles of drinking water lines, 6 drinking water storage tanks and 4 booster pumping stations, 348 miles of wastewater collection lines (14 miles of this total are pressurized force mains, 21 wastewater pumping stations, the Mason Farm Wastewater Treatment Plant (WWTP), 5 miles of reclaimed water lines, about 2,300 fire hydrants, and over 10,925 manholes.

OWASA currently uses Infor's MP2 CMMS system at both the Jones Ferry Road Water Treatment Plant and the Mason Farm Wastewater Treatment Plant and other facilities (pump stations, storage tanks, etc.). MP2 is also utilized for vehicle maintenance. OWASA has identified a need to replace MP2 with a new CMMS system for work order management, asset management, cost tracking, and other various needs at the facilities. MP2 has been at the facilities for the past 20 years. Over that past few years, if they meet OWASA's needs. However, OWASA is also open to keeping separate CMMS systems for the distribution and collection system (horizontal assets) and the plants (vertical assets) if that better meets the organization's needs.
